Legal Data Universe

Findings Memorandum

Matter: NovaChip / Reyes Falcon source-code investigation (fictional synthetic matter)
Selection: All 3 approved finding(s)
Date exported: 2026-11-03T22:35:32.680Z
Corpus: novachip-trade-secret-3000

Synthetic demonstration data only - not client evidence, not connected to Relativity or any live matter.

Executive Summary

3 investigator-approved finding(s) are included. Rejected and undecided drafts are excluded.

1. **Lead 1 - The midnight acquisition [SUPPORTED]**
   Reyes acquired Falcon material through anomalous channels shortly before departing (off-hours full-history clones; unregistered USB write).
2. **Lead 2 - Secrets leave through a personal mailbox [SUPPORTED]**
   Reyes transferred Falcon scheduler tuning parameters outside NovaChip (personal mailbox forward).
3. **Lead 3 - The smoking gun reaches HelixWorks [SUPPORTED]**
   Reyes transferred Falcon SOURCE CODE (e.g. scheduler_core.ts) to HelixWorks or another external party.

Bottom line: the evidence establishes acquisition, an external tuning-parameter transfer, and direct delivery of scheduler_core.ts to a HelixWorks engineer. It does not establish upload to or use inside HelixWorks systems.

Approved Findings

1. Lead 1 - The midnight acquisition

Finding ID: finding-1 | Verdict: supported | Source: Multi-specialist deterministic assessment (QC-checked) | Approved: 2026-11-03T22:35:32.678Z

Reyes acquired Falcon material through anomalous channels shortly before departing (off-hours full-history clones; unregistered USB write).

Question asked

Demo lead

Why it matters

This establishes the acquisition timeline and the channels available to Reyes after resignation. It does not, by itself, establish the contents of the USB device.

Evidence supporting the finding

- ts-003 - Git audit log extract - falcon-scheduler (2026-06-14): "Audit extract: user ereyes cloned falcon-scheduler (full history) 2026-06-13 23:41 and again 2026-06-14 00:17 from a non-standard host."

- ts-004 - USB device event - workstation WS-4471 (2026-06-15): "Endpoint log: unregistered USB mass-storage device mounted on WS-4471 (E."
- ts-020 - Text message - Reyes to Raj (USB) (2026-06-17): "Please do not put this in email."
- ts-015 - Forensic timeline notes (draft) (2026-07-15): "Working timeline: resignation June 2; clones June 13-14 (ts-003); USB June 15 (ts-004); personal forward June 16 (ts-005/006); last day June 19; Helix start June 29."

Counterevidence and limitations

- ts-008: "Approved as requested: you may copy the Falcon debug bundle (logs + config, no source) to removable media for the customer onsite session on May 29."
- ts-018: "Grace: Reminder that the scheduled FALCON-MIRROR disaster-recovery job performs a full clone at 23:30 under the svc-mirror account."
- USB device contents were never imaged; ts-008 approval covers a May 29 log/config bundle with device logging, not the June 15 unregistered device. The scheduled svc-mirror clone explains a service-account event, not the named-user clone in ts-003.

Recommended next step

Forensically scope the June 13-15 clone/USB window and reconcile device serials against the May approval.

2. Lead 2 - Secrets leave through a personal mailbox

Finding ID: finding-2 | Verdict: supported | Source: Multi-specialist deterministic assessment (QC-checked) | Approved: 2026-11-03T22:35:32.678Z

Reyes transferred Falcon scheduler tuning parameters outside NovaChip (personal mailbox forward).

Question asked

Demo lead

Why it matters

This establishes that confidential Falcon tuning parameters left NovaChip and tests the authorization explanation against the approval's express scope limit.

Evidence supporting the finding

- ts-005 - Falcon notes for myself (2026-06-16): "Forwarding my Falcon design notes and scheduler tuning parameters to my personal mailbox so I can finish the handover doc from home this weekend."
- ts-006 - falcon-tuning-notes (2026-06-16): "Falcon scheduler tuning parameters: cache eviction thresholds, NUMA pinning matrix, and benchmark deltas vs the baseline scheduler."

Counterevidence and limitations

- ts-007: "Approval does NOT cover scheduler tuning parameters or benchmark data."
- ts-014: "Reyes confirmed return of laptop and badge, denied retaining company material, and declined to name her new employer."
- The stated purpose (finishing handover from home) is in the same record; intent is for the attorney, not this assessment. ts-007 approval explicitly excludes tuning parameters.

Recommended next step

Preserve and review the personal-mailbox attachment family and determine whether it was forwarded or retained after departure.

3. Lead 3 - The smoking gun reaches HelixWorks

Finding ID: finding-3 | Verdict: supported | Source: Multi-specialist deterministic assessment (QC-checked) | Approved: 2026-11-03T22:35:32.678Z

Reyes transferred Falcon SOURCE CODE (e.g. scheduler_core.ts) to HelixWorks or another external party.

Question asked

Demo lead

Why it matters

This is the direct source-code delivery evidence: sender, recipient, attached file identity, and receipt align. Downstream use at HelixWorks remains a separate question.

Evidence supporting the finding

- ts-022 - For your eyes only - scheduler_core.ts (2026-06-18): "Oleg - attached is the current NovaChip scheduler_core.ts from my June 13 clone."
- ts-023 - scheduler_core.ts (email attachment) (2026-06-18): "NovaChip Confidential scheduler core."
- ts-024 - Re: For your eyes only - scheduler_core.ts (2026-06-19): "The scheduler_core.ts file compiles on my air-gapped laptop."
- ts-025 - Teams chat - HelixWorks scheduler evaluation (2026-06-20): "Oleg: I deleted the ZIP Elena sent after the air-gapped build worked."
- ts-013 - scheduler_core.ts (repository snapshot) (2026-06-13): "Repository snapshot of scheduler_core.ts at the time of the audit-log clones (ts-003)."

Counterevidence and limitations

- ts-009: "Reminder of your obligations: do not bring or use any NovaChip confidential material here."
- ts-010: "Clean-room protocol v3: engineers with competitor backgrounds work from public specifications only; all design inputs logged; no external code or documents may be introduced without Legal review."
- ts-026: "This public scheduler_core.ts contains eviction statistics helpers only."
- ts-019: "No source code was sent to HelixWorks or any external party for this April escrow verification, and the sealed media remained in Legal custody."
- Computed attachment fingerprint: ts-023 MD5 fa1c0de5c0ffee1234567890abcdef42 matches internal snapshot ts-013. The public cache-utils extract (ts-026) and April escrow verification (ts-019) are separate records and do not explain the June 18 send.
- Receipt and a local compile are established. Use inside HelixWorks systems or a product is NOT established: ts-024 says it was not uploaded, and ts-025 says the ZIP was deleted after the air-gapped build.
- Exhaustive search "scheduler_core" found 7 record(s), including the public red herring; read content and fingerprints before treating filename matches as transfers.

Recommended next step

Preserve the recipient laptop and deleted ZIP, audit clean-room and repository logs, and scope downstream use before alleging product contamination.

Investigation Scope and Method

The active corpus is novachip-trade-secret-3000. It contains 3000 synthetic records. Only the 3

approved finding(s) named above are included in this memo.
Deterministic tools performed retrieval, counting, relationship/family tracing, file-fingerprint comparison, and verbatim-quote verification. The AI planner/synthesizer was restricted to the evidence supplied by those tools. A human investigator approved or rejected every draft; no finding in this memo was auto-approved.
Planted or synthetic story evidence is not represented as real-world evidence. Identity, dates, organizations, and content are fictional demonstration data.

Appendix A - Source Records and Provenance

ts-003 - Git audit log extract - falcon-scheduler

Date: 2026-06-14 (verified) | Kind: note | Custodian: Petrov, Ivan | People: Ivan Petrov, Elena Reyes
File: git-audit-log-extract-falcon-scheduler.log | MIME: text/plain | MD5: f8d085b8cf8d6ab84300fda099bf4fac | Source path: /collections/novachip/ivan/git-audit-log-extract-falcon-scheduler.log
Provenance: synthetic-trade-secret-generator | Collection: novachip-trade-secret | Content hash: seed-7 | Ingested: 2026-10-31T00:00:00Z

ts-004 - USB device event - workstation WS-4471

Date: 2026-06-15 (verified) | Kind: note | Custodian: Petrov, Ivan | People: Chris Nolan, Elena Reyes
File: usb-device-event-workstation-ws-4471.log | MIME: text/plain | MD5: 89263ddbaf9bf739cd3878247720201e | Source path: /collections/novachip/chris/usb-device-event-workstation-ws-4471.log
Provenance: synthetic-trade-secret-generator | Collection: novachip-trade-secret | Content hash: seed-7 | Ingested: 2026-10-31T00:00:00Z

ts-005 - Falcon notes for myself

Date: 2026-06-16 (verified) | Kind: email | Custodian: Reyes, Elena | People: Elena Reyes
File: falcon-notes-for-myself.msg | MIME: application/vnd.ms-outlook | MD5: b55cbc8c6948c14ddc65e457d6f86584 | Family: fam-falcon-notes | Source path: /collections/novachip/elena/falcon-notes-for-myself.msg
Provenance: synthetic-trade-secret-generator | Collection: novachip-trade-secret | Content hash: seed-7 | Ingested: 2026-10-31T00:00:00Z

ts-006 - falcon-tuning-notes

Date: 2026-06-16 (verified) | Kind: document | Custodian: Reyes, Elena | People: Elena Reyes
File: falcon-tuning-notes.docx | MIME: application/vnd.openxmlformats-officedocument.wordprocessingml.document | MD5: 76be8a2b69d641abf541becdf3f486bc | Family: fam-falcon-notes | Parent: ts-005 | Source path: /collections/novachip/elena/falcon-tuning-notes.docx
